

OFFICIAL PROPOSAL & EXECUTIVE PRESENTATION

ABUJAFIX SOLUTIONS LIMITED

Smart Civic Engagement, Infrastructure Monitoring & Public Safety Platform

A next-generation civic technology framework connecting citizens directly with security agencies, public safety authorities, and government institutions for real-time reporting and rapid response.

ADDRESSED TO:

**Civil Defence, Correctional, Fire and Immigration
Services Board (CDCFIB)**

Office of the Honourable Minister of Interior / Defence Framework

PRESENTED BY:

Emeka Precious Enyioha (Founder & CEO)

The Public Safety & Civic Challenge

EXECUTIVE SUMMARY

1. Emergency & Hazard Reporting Gaps

Citizens often face critical delays when reporting localized public safety hazards, security threats, fires, or municipal breakdowns due to fragmented communication channels between the public and response agencies.

2. Lack of Real-Time Geospatial Intelligence

Command centers and public safety agencies require immediate, precise GPS-verified location data from the field to deploy emergency personnel and maintenance units efficiently.

3. Public Trust & Accountability

Without transparent status tracking, citizens lack visibility into whether their reported safety and infrastructure concerns have been received and acted upon by relevant authorities.

Real-Time

GEOSPATIAL INTELLIGENCE

Instant incident mapping for law enforcement, fire services, and emergency responders.

< 15 Mins

TARGET DISPATCH ROUTING

Automated routing of verified citizen alerts directly to tactical command centers.

The Civic Technology Framework

SYSTEM ARCHITECTURE

1. Citizen Mobile Reporting

Instant Alerts: Residents submit geo-tagged photo/video reports for emergencies, public hazards, security concerns, and infrastructure issues.

Verified Data: Built-in GPS validation ensures incoming reports are authentic and pinpointed accurately on the map.

2. Command Center Dashboard

Unified Command Hub: Centralized dashboard for agency administrators to view live heat maps, incident severity, and field team deployment.

Multi-Agency Routing: Intelligent dispatching of reports to Civil Defence, Fire Services, or Municipal units based on incident type.

3. Response & Resolution

Field Team Sync: Emergency and maintenance teams receive real-time dispatch alerts with direct turn-by-turn navigation.

Feedback Loop: Citizens receive status updates as their issue transitions from "Reported" to "Dispatched" and "Resolved".

Strategic Value to Public Safety Agencies

INSTITUTIONAL BENEFIT

1. Early Warning & Rapid Response Engine

Transforms millions of citizens into proactive eyes and ears on the ground, allowing emergency agencies to detect threats, fires, and infrastructure failures before they escalate.

2. Data-Driven Operational Intelligence

Provides agency leaders with analytics and trend mapping to deploy security patrols, fire units, and disaster management teams to high-risk zones effectively.

3. Seamless Inter-Agency Collaboration

Fosters integrated communication between Civil Defence, Fire Services, and state authorities under a single standardized digital infrastructure.

4. Public Trust & Transparent Governance

Demonstrates modern, tech-driven public service delivery, reassuring the populace that government institutions are responsive and accountable.

EMEKA PRECIOUS ENYIOHA

FOUNDER & CHIEF EXECUTIVE OFFICER — ABUJAFIX SOLUTIONS LIMITED

- **Technology Architect & Founder:** Specialist in designing full-stack mobile and cloud applications tailored for public sector digital transformation.
- **Civic Technology Innovator:** Passionate about building software infrastructure that connects citizens directly with public safety, emergency response, and government frameworks.
- **Project Director:** Overseeing the platform architecture, strategic partnerships, and deployment execution for Abujafix Solutions Limited.

CORPORATE INFORMATION

Entity: Abujafix Solutions Limited

Sector: Information & Comm
Technology / Civic Tech

Headquarters: Abuja, FCT, Nigeria

All official correspondence, partnership proposals, and grant documentations are coordinated directly through the Office of the Founder.

Project Support & Capacity Deployment

RESOURCE ALLOCATION

To deploy the Abujafix civic platform and establish direct command center integrations with safety agencies under the Board, Abujafix Solutions Limited seeks project development support and grant funding.

Deployment Phase	Technical Deliverables	Target Outcome
Core Cloud & Security Architecture	High-security encrypted server hosting, database infrastructure, and automated GPS alert routing engines.	24/7 Platform Reliability
Agency Dashboard Integration	Custom monitoring dashboards and dispatch portals for command centers under the Ministry/Board.	Real-Time Incident Control
Public Awareness & Civic Onboarding	Public sensitization campaigns to encourage citizen reporting of security hazards and emergency alerts.	Widespread Citizen Adoption
Technical Support & Operations	Dedicated technical support staff, system maintenance, and agency officer onboarding workshops.	Seamless Institutional Deployment

Institutional Partnership & Disbursement

ACTIONABLE NEXT STEPS

Partnering for National Safety & Civic Efficiency

Abujafix Solutions Limited is fully registered and legally structured to partner with government agencies, receive development grants, and execute public sector civic tech initiatives.

We respectfully present this proposal to the Board for approval of a pilot partnership and project grant support.
