Abujafix Civic Response Platform

Next-Generation Civic Incident Reporting & Public Sector Management Framework — bridging citizens, municipal administrators, and emergency response bodies across the Federal Capital Territory and beyond.

ABUJAFIX SOLUTIONS LIMITED

MUNICIPAL & PUBLIC AGENCY INTEGRATION

MANDATE & PURPOSE

Seeking Institutional Partnership, Deployment Approvals, Full Administrative & Financial Support for Scale.

Executive Summary

Abujafix is an **enterprise-grade civic management technology** designed to modernize emergency response, infrastructure reporting, and municipal service auditing. In rapid urban expansion centers like Abuja, public administration efficiency relies on timely, accurate data from the ground. Abujafix establishes a direct, secure, and transparent channel for citizens to report critical issues directly to relevant agency command centers in real time.

The Challenge We're Solving

Infrastructure Failures

Roads, utilities, and public facilities go unreported or unresolved for extended periods.

Public Safety Concerns

Fire hazards, security threats, and environmental issues lack a direct reporting channel.

Agency Coordination Gaps

Without real-time data flow, emergency response bodies and municipal administrators cannot act swiftly.

Mobile-First Citizen Reporting

Citizens can effortlessly submit real-time reports through an intuitive mobile interface designed for rapid urban environments.

Photo Evidence

High-resolution photo submission with every report.

GPS Spatial Tagging

Automated location tagging for precise incident mapping.

Category Selection

Precise incident categorization for accurate routing.

Anonymous Reporting

Optional anonymous workflow to safeguard community whistleblowers on sensitive public safety matters.

Intelligent Multi-Agency Command Dashboard

A dynamic ticket routing engine automatically dispatches reports based on administrative jurisdiction and department responsibility. Features live analytics, dispatch management, and response SLA tracking — giving agency command centers full visibility into incident status and field operations.

→ **Community Security**

Verification & Institutional Accountability

Built-in verification workflows require on-ground field inspection updates before incident resolution. Automated notification pipelines keep citizens informed at every stage, driving institutional trust, transparency, and public accountability across all municipal agencies.

System Governance & Architecture

Role-Based Access Control (RBAC)

Granular permissions ensuring agency personnel only view and manage data strictly within their administrative jurisdiction.

High-Availability Cloud Security

Hosted on scalable enterprise-grade cloud infrastructure featuring end-to-end data encryption and compliance with national data privacy regulations.

Pure Civic Solution Mandate

Formulated exclusively as a civic infrastructure and public safety solution platform, completely decoupled from revenue collection mechanisms.

Platform at a Glance

3

Core Capabilities

Mobile reporting, multi-agency dashboard, and verification workflows.

4

Agency Categories

Public Works, Waste Management, Fire Services, and Community Security.

100%

Strictly non-revenue, public safety-focused platform.

- ❏ Abujafix is built exclusively for public sector and civic technology — no revenue collection mechanisms, no commercial overlay.
